

Cloudply: Media Transfer — Privacy Policy

Effective date: August 15, 2026. Developer: Abdul Khaliq Mangat — <https://cloudply.abdulkhaliqmangat.com>

1. Information we handle

Provider accounts you connect

- You choose to connect cloud provider accounts (Google Photos, Dropbox, Box, OneDrive, MEGA, or local storage). Cloudply stores basic account information — such as the account name, provider type, and storage usage reported by the provider — on your device so the app can resume and manage transfers.

OAuth tokens

- When you sign in, your provider issues an OAuth token that lets the app read and write the media you authorize. Tokens are stored in the secure credential storage of your operating system (for example, Android Keystore or iOS Keychain). They are never written to plain files, never uploaded, and never shared with anyone.

Media metadata

- To build transfer plans and progress reports, Cloudply stores metadata about your media — such as filenames, file sizes, modification dates, and provider item identifiers — in a local database on your device. This database never leaves your device.

Temporary media files

- During an active transfer, media may be staged temporarily on your device so it can be moved reliably between providers. Temporary files are used only while a transfer is active and are removed as soon as the transfer completes. No media binary is persisted beyond an active transfer lifecycle.

Transfer logs and diagnostics

- The app keeps local logs of transfer activity (for example, which items succeeded or were skipped, and error codes) so that interrupted transfers can resume and you can review what happened. Crash information generated by the operating system may be collected by the app store platforms (Google Play, Apple App Store) according to their own policies.

2. How we use your data

- Transferring media: the sole purpose of the app is to copy media you select between the providers you authorize.
- Resuming transfers: local metadata and logs let interrupted work recover without duplicating media.
- Improving reliability: aggregate crash and diagnostics data (when provided by the platform) is used to fix bugs.

3. What we do not do

- We do not sell, rent, or trade your personal data.
- We do not serve ads, and we do not build advertising profiles.

- We do not grant human access to your media or metadata.
- We do not host your media on our own servers.
- We do not read the contents of your files beyond what is required to copy them between the providers you choose.

4. How each provider's data is used

- Google Photos: Cloudply uses the official Google Photos picker, which is limited to the items you select. The app never requests full-library access. Selected items are copied to the destination you choose. Storage figures shown in the app for Google Photos reflect selected items only, not your full Google Photos quota.
- Dropbox, Box, OneDrive, MEGA: Cloudply requests access to the folders you authorize, reads the metadata of media in those folders, and copies media you select. No content is used for any purpose other than performing your transfers.

5. Data retention and cleanup

- Temporary files are deleted when a transfer completes. If a transfer is interrupted, staging files are kept only long enough to recover progress and are removed on cleanup.
- Local metadata and logs are retained until you remove the related account or clear the app's data, whichever comes first.
- Deleted items in the app's local index are removed from the device when you delete an account or choose to clear data.

6. Removing your account and data

- You can disconnect a provider and delete its local data at any time from Settings inside the app. Deleting an account removes the saved tokens, local metadata, and logs for that account; it does not delete files from the provider itself, because Cloudply never modifies or deletes your source files unless you explicitly confirm a delete action.
- To request full deletion of data associated with your email address, or if you have questions about this policy, contact privacy@abdulkhaliqmangat.com. See the Delete Account page at <https://cloudply.abdulkhaliqmangat.com/delete-account> for the full procedure.

7. Children's privacy

- Cloudply is not directed at children under 13, and we do not knowingly collect personal information from children.

8. Security

- Tokens are stored in OS-level secure storage, transfers run on your device, and the app contains no server component that could be breached to access your media. See <https://cloudply.abdulkhaliqmangat.com/security> for details.

9. Changes to this policy

- If this policy changes, the revised version will be posted at <https://cloudply.abdulkhaliqmangat.com/privacy> with a new effective date. Significant changes will be noted in app release notes.
